

PTCOG ECR meets IBA

Career Opportunities at IBA

PROJECT MANAGER

General Mission

Full project management responsibility including cost, quality, deadline in line with the BU strategy. Strong relationship with all internal/external stakeholders to guarantee perfect delivery of project

Note: There are three levels of project manager within IBA. The general mission and main activities are equivalent for each level. The distinction between each level, and the assignment of an individual to one of these levels, is based on an overall assessment against a set of criteria, namely: - The number of projects to be managed simultaneously, their duration and the total budget associated thereto; - The project team to be managed, either directly or indirectly, and the required contacts, both internally and externally; - The technical and financial risks associated with the project(s) - The impact of the project(s) on the client(s) and our business.

Main Tasks

- **Organize and coordinate the necessary resources (material and labour) up to the end of the project depending on the business/scope:** Project delivered within deadlines, scope, budget and required quality (with tool like Project management plan, Product Life Cycle Management ...)
- **Analyze and manage risks (technical, feasibility, financial, resources, safety, health, ...):** Risks defined and action plan under control (with tools like Risk analysis, assessment report ...)
- **Lead and coordinate project team in related field of business (pharma, equipment, ...):** Guidance and support to the team ; efficient communication, training plan implemented
- **Main internal/external contact point for the project execution ; seek customer satisfaction and ensure support to internal and/or external customers.** Internal/external Customer satisfaction; precise and on time reporting; development plan and customer milestones respected
- **Reporting and KPI are communicated, analyzed and action plans are proposed for decision making:** Project sheet completed, communicated and updated & Action plan followed up & Project budget planning and follow-up
- **Identify development issues early, seek continuous improvement:** Improvement proposals properly transferred to the ad hoc departments & Proactively escalate development issues
- **Transfer to the team in charge of the post-project support (Customer Service department, product manager, operations,...)**
- Spare parts stock, system configuration, snag list communicated & Project documentation (marketing authorization, check-list completed, historical event list, manuals, ...)
- **Organize project closure:** Snag list completed/ cash recovered/ stock reconciled with SAP/ acceptance criteria
- **Set up, develop and improve tools, processes, environment, structure , ... :** Internal and external processes defined, optimized

PRODUCT MANAGER

General Mission

Guarantee success/optimization/standardization of products to market, through the life cycle. Analyze the market, the customer's needs and other stakeholders' needs and ensure all communication on market/business opportunities. Optimization/development of products and participation to product innovation. For product development : Product program planning and follow-up through the product lifecycle following the PRD (phase review discipline)/PLCM (profit life cycle management) framework.

Main Tasks

- **Business case : Build business case for new or existing products.** Business case (goals, objectives, profitability, added value, impact on market, revenues...)
- **Roadmap definition : Product roadmap definition (new products) and evolution (existing products): Define product requirement; Contribute to products developments; Contribute the BU yearly strategic plan (budget, ...).** Product roadmap definition matching all stakeholders' needs & Participation to project development teams
- **Roadmap implementation follow up:** Budget, PRD method, customer satisfaction
- **Develop product and market expertise:** Market, customers expertise
- **Networking : Develop internal and external network , assess partnerships.** Maintain and expand its network & Partnership agreements
- **Market awareness : Listen to the market and detect opportunities, Suggest program effectiveness improvements .**Actively suggest improvements, report opportunities
- **Product market : set up and execute marketing plan to ensure successful product launches.** Successful product launches
- **Product descriptions : Create and maintain updated product descriptions (for customers, sales, R&D)Efficient product packaging (pricing, costing, ...).** Accurate documentation and communication materials(brochure, videos)
- **Product support : Provide product information and training to sales teams, partners (PET Linq), distributors and/or customers.** Sales teams, distributors and/or customers properly informed and trained & Offers are compliant to technical and gross margin requirements

General Mission

Ensure the quality of the product to align its properties with the customer's requirements. Hold a cross-disciplinary look to deal with complex questions regarding the provided technical solutions. As a referent, ensure an organizational consistency and sustainability.

Main Tasks

- **Master two Engineer Job Descriptions level:** Master all tasks described in at least two Engineer Job Descriptions.
- **Model and document the component:** Provide the system architecture documentation to describe how the components consistently interact with each other and how a new feature is added into the system so that it is compatible. Produce standardized deliverables (e.g. component).
- **Coordinate engineers' work:** Lead a functional analysis to describe chronologically the system on the logical level, a static description explains defining how each subcomponent is integrated into the higher component, and the interactions between all components. Define the tools (communication, documentation, modeling, conception). Provide guidelines through the requirements translation into objectives.
- **Validate system design and architectural models:** Ensure that the system design is compliant with the requirements, good practices and IBA's standards. Be in charge of the technical document approval pertaining to the considered system. Validate the traceability between requirements and design. Take the decision regarding the implementation of a change within the complex parts of the system and be responsible for its impact(s).
- **Lead the technical risks analysis:** Define standardized methodologies to identify risks (e.g. FMEA) and improve this process. Help defining standards with specialists. Be accountable for the risk analysis and risk mitigations.
- **Define rules, processes and best practices. Ensure consistency between engineers:** Define rules, processes and best practices. Guarantee their compliance by all the engineers. Be up-to-date with the latest normative standards and translate them into guidelines.
- **Suggest innovative solutions and technology:** Implement solutions across diverse technology panels (for the products, tests, techniques, procedures, etc.). Establish proof-of-concept need.
- **Ensure technology and/or scientific watch to suggest methodologies, framework and standards:** Evaluate new technologies and approaches in order to improve the existing product. Update job knowledge by studying state-of-the-art methodologies (process FMEA, requirements flow down, reliability, etc.), by reading professional publications and magazines and by maintaining personal network.
- **Coach and train engineers:** Facilitate the training of engineers by acting as a technical coach and sharing knowledge of the company. Provide own expertise to engineers in their daily tasks and along their career. Spread knowledge within the organization by identifying and participating in training initiatives. Provide guidelines by participating at the training's material production.

REQUIREMENTS AND RISKS EXPERT

General Mission

Ensure the quality of the user and system requirements to align its properties with the customer's needs. Ensure that the requirements are used as inputs for development. Hold a cross-disciplinary look to deal with complex questions regarding the provided technical solutions. As a referent, take the lead of requirements and risks engineering.

Main Tasks

- **Master the Requirements and Risks Engineer level:** Master all tasks described in Requirements and Risks Engineer Job Description (RD49).
- **Perform requirements engineering for complex system:** Perform requirements engineering for projects with a high level of risks, with multiple components, high development costs, numerous environmental constraints, multiple business dimensions (stakeholders).
- **Interface externally with stakeholders:** Actively listen and gather inputs that will be taken into account to make decisions. Convince and negotiate (e.g. introduce a project plan, an architectural solution, a new development process).
- **Ensure domain watch to suggest methodologies, framework and standards:** Evaluate new technologies and approaches in order to improve the existing product. Update job knowledge by studying state-of-the-art development tools, vendors catalog, norms and standards, by reading professional publications and magazines and by maintaining personal network.
- **Coach and train Requirements and Risks Engineer:** Facilitate the training of engineers by acting as a technical coach and sharing knowledge of the company. Provide own expertise to engineers in their daily tasks and along their career. Spread knowledge within the organization by identifying and participating in training initiatives. Provide guidelines by participating at the training's material production.
- **Define rules, processes and best practices. Ensure consistency between Requirements and Risks Engineers:** Define rules, processes and best practices. Guarantee their compliance by Requirements and Risks Engineers. Be up-to-date with the latest normative standards and translate them into guidelines.
- **Be aware and contribute to the patent context:** Know existing patents and one's freedom to operate. Contribute to third parties observation and opposition. Identify new patents opportunities. Identify opportunities for patent take-out, with external stakeholders, Researchers and patent office.
- **Master at least one application domain (optional):** Have a deep understanding of an application domain.
- **Take the role of Requirement and Risks Architect (optional):** Design and validate high-level architecture. Have a long-term vision. Make technical decisions in collaboration with the staff of engineers and experts. Convince people. Ensure consistency between teams. Be the main point of contact for any architectural requests.

ABOUT IBA

IBA is a **world leader** in particle accelerator technology.

It designs, produces, and markets innovative solutions for the diagnosis and treatment of cancer and other serious illnesses, and for industrial applications such as sterilization of medical devices, phytosanitary treatment, or material enhancement. Around the world, thousands of hospitals use particle accelerators and dosimetry equipment designed, produced, maintained and upgraded by IBA, making its mission to protect, enhance, and save lives true. IBA's life-driven mission and the open relationships it has built with customers and partners over time, together with its innovative mindset and willingness to always strive for technological and scientific progress, make IBA a unique company.

It is characterized by a deep human connection that is illustrated by its tagline :

Through its four core activities: Industrial Solutions, Radio Pharma Solutions, Proton Therapy and Dosimetry, it offers solutions that allow them to take a fully integrated approach to health and environmental matters.
